

Sunshine Youth and Women's Center

Project Profile: Special Project

Owner: Sunshine Ministries

Architect: St. Louis Design Alliance

Description: This project consisted of an existing 15,000 square foot warehouse that was converted to a Youth and Women's Center. The warehouse had to have a large quantity of the roof decking replaced before the new roof could be applied and all the floor slabs had to be removed and re-poured to achieve a level floor. The interior finishes include vinyl composite tile, carpet, and ceramic tile on the walls in the restrooms. As you can see from the pictures, the areas for the younger children are painted with vibrant colors.
