

Cole County EMS

Project Profile: Institutional

Owner: Ameresco c/o County of Cole, Missouri

Architect: Uhlig Architecture, LLC

Description: This project was the creation of 4,600 sf of living quarters within an existing metal building warehouse facility. This included new private bunk rooms, kitchen, 2 refrigerators, custom cabinets, new bathrooms, laundry facilities, and a new energy efficient Daikin heating & cooling system and energy efficient lighting. A new dispatch center and a new IT room were created for notification and communications. The metal building was modified to receive 3 new sectional high bay OH doors with power operators and the addition of interior trench drains, lighting, water, and heating units and a colored sealer coating on the 3,360 SF garage bay floor. On the exterior, excavation and the installation of retaining walls created space adjacent to the building for three ground mounted HVAC units, generator, and a recreational concrete patio. Grading and subgrade preparation and the installation of 4,900 sf of heavy concrete paving were provided in the existing green space to create new ambulance unit access and response routes.

The project was completed in 95 days per the fire department's schedule.
